The association of the hepatitis B vaccine with endocrine disorders in children: a retrospective cohort study. Hepatitis B vaccination is associated with an increased incidence of autoimmune and auto-immune diseases, as well as adverse reactions. There are few studies in the literature on the risk for development of endocrine disorders in children. We aimed to investigate the association of the hepatitis B vaccine with endocrine disorders in pediatric patients. A retrospective cohort study was conducted from January 2005 to December 2014. The study cohort included patients who underwent surgery at a paediatric hospital and who received their first hepatitis B vaccine. The control group included patients matched by age and gender who did not receive the vaccine. Two endocrine disorders were observed in the study population, with an OR=4.0 (95%CI 1.0-15.9). We found no differences between the vaccinees and controls. There was no increased risk for development of endocrine disorders in this population.Privacy We are very interested in your security and take this very seriously.
