Before reading further, download the free and fastest SharePoint Project Planner tool from our site. Its features are :-Compares with existing SharePoint project plan and updates planIf you have read this article you will know that we have taken care to ensure that all the important data types available in MS Excel are available in Microsoft Access. Some important data types include date, time, currency, percentage, integer, decimals, special formats and text etc. So we have used them to import data from Excel to MS Access tables.However, we have another reason to do so. The decision to upgrade to Microsoft Access was taken at a very early stage, when the end-user interface was only the bar chart - Microsoft Access does not support the pie chart, line chart, sparkline chart etc. So we have removed the bar chart and replaced it with a pie chart.We have also removed the date range entry from the user interface, as the date range can be entered through the queries in MS Access.If you are still wondering why we are writing about these details when we are discussing a tool for SharePoint planning, it is because these things are important to make sure that the tools you use are for the purpose for which they are designed. You can use the tool for planning but you should keep in mind all these details to make sure you end up with the best tool for the job. So from the above, we can conclude that we can use the tool for planning while we can use the tool for displaying the result, with a few tweaks to make sure the tool provides the best output for the task at hand.The tool is available in both 32-bit and 64-bit flavors. However, to make the tool available in both 32-bit and 64-bit versions, the tool itself is a 64-bit executable, and therefore you have to make sure that you have a copy of MS Access installed on your system that is 64-bit in nature.You can download the tool from here.While some people may think that the Preemptive Priority Scheduling Program In C Download For Windows 7 tool is developed for SharePoint planning, its actually a tool for planning which may be used for SharePoint planning.But yes, when used for SharePoint planning, the tool provides the output in the form of a SharePoint plan.This comes from the fact that the tool runs queries in Access to return the data for the tool.The tool is run in the background, and therefore, when you run the tool, you are actually 82157476af
